

Comirnaty Expiry: Maroon, Orange and Grey Cap

Comirnaty 3mcg, 10mcg, 30mcg and 15/15mcg COVID-19 Vaccines

Vaccine shelf life has recently been extended for storage in freezer.

This means the expiry printed on vial may have passed, but **vaccine is still viable.**

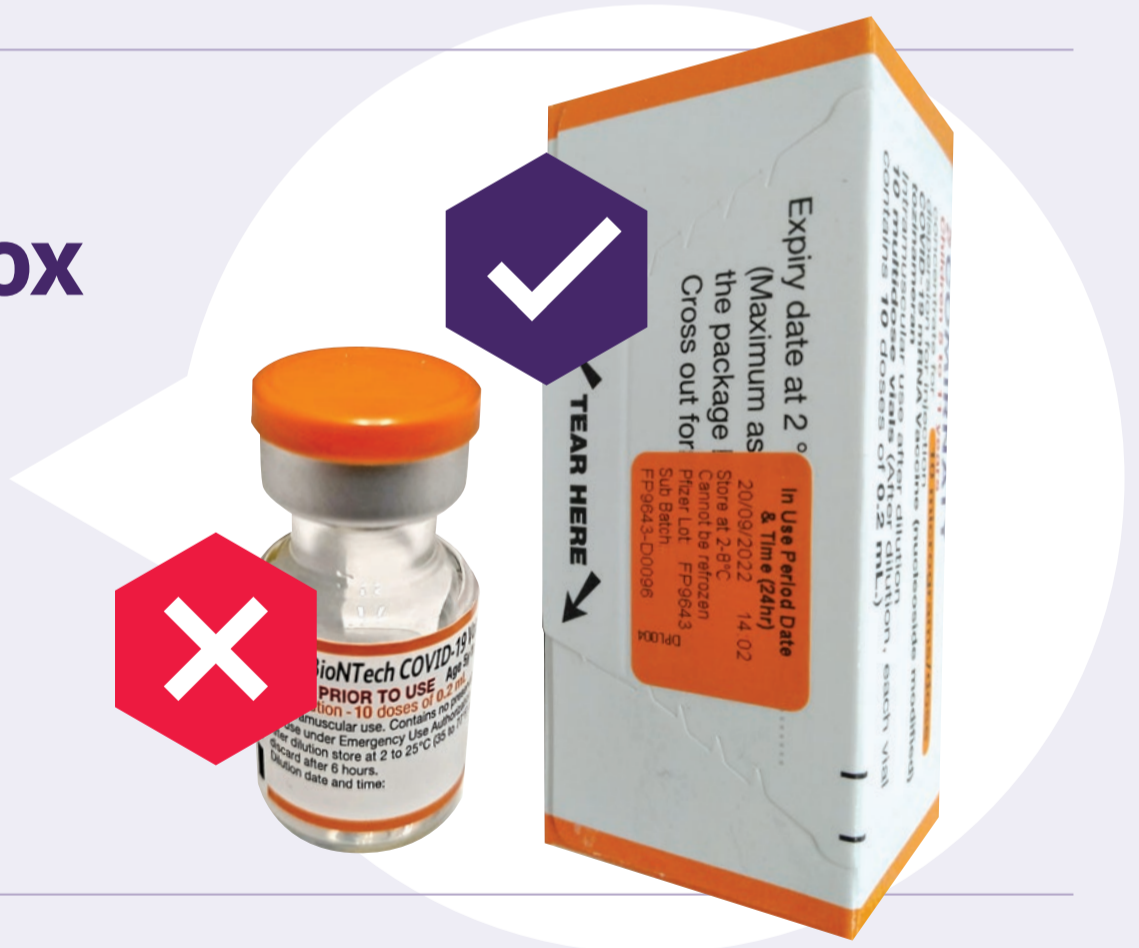

Always follow 'in-use' expiry on box

Vaccinators must always use the 'in-use' expiry printed on box.

Expiry printed on box supersedes vial expiry.

Always keep vials with the box they arrived in.

Site stores vaccines at 2°C to 8°C.
Use expiry on box not the vial.

Vial may appear expired, but as long as expiry on box is in date, it is still valid.

NO CHANGE IN THESE IN-USE TIMES/STORAGE CONDITIONS. DO NOT SEPARATE VIALS FROM BOX.
